Information about the product

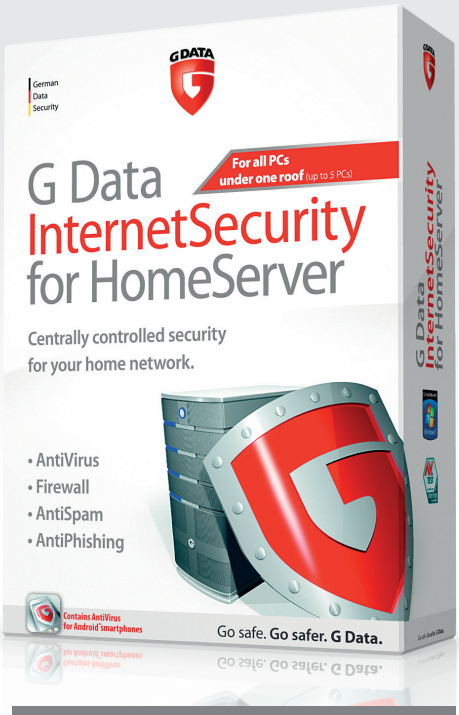
G Data InternetSecurity for Homeserver

Centrally controlled security for your home network.

From your favourite movies and music collections to important documents and treasured family photos, your home server contains irreplaceable data.

That is why you should protect your home network with the professional security solution from G Data.

G Data InternetSecurity for HomeServer protects your home server and all PCs connected to it (up to 5 PCs). Protection is controlled centrally on the home server and is completely transparent on the PCs connected to it. Thanks to mobile clients your data is also secure when you're on the road with your notebook.



Includes a one-year licence for 5 PCs with hourly virus signature updates, software updates and version upgrades.

With 24h/365 day service hotline.

Award-winning technology

- Award-winning virus detection thanks to two virus scanner modules
- Secure protection against viruses, worms, rootkits, spyware, diallers, Trojans, adware and other riskware
- Instant protection against new viruses: email and web-based CloudSecurity blocks infected emails or websites in real time
- Integrated rootkit blocker / special module for discovering rootkits

G Data ManagementServer

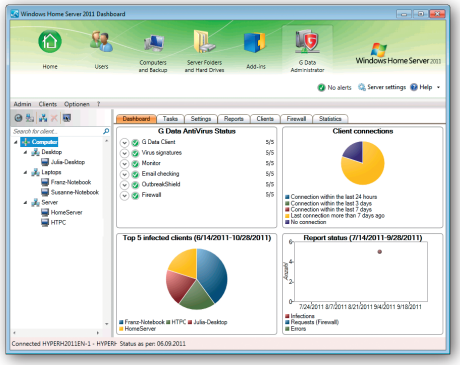
- Easy setup: installation, virus scan, updates, settings and reports are remotely controlled using the home server
- Seamless integration into the Microsoft HomeServer 2011 console
- Automatic distribution of updates in the network
- Also central administration of clients that are not always connected to the home server (notebooks, netbooks, tablet PCs)

G Data AntiVirus and AntiSpam client

- „Invisible" client protection in the background, including for computers that are not permanently connected to the home server.
- Mail protection for Outlook, Outlook Express, Mozilla and POP3 / IMAP mail clients
- CloudSecurity: Instant protection against new viruses and spam
- Fully functional when working offline
- If desired, independent settings and virus scans on the client are possible

G Data Firewall client

- Remotely controlled installation and configuration
- Simple administration using individual learnable access rules on the client
- Monitors all incoming and outgoing connections
- Blocks and reports DoS attacks, port scans and much more.
- Four security levels or expert mode
- Invisible stealth mode



- System requirements:

- Microsoft Windows XP (SP2 or above, 32bit) with 512 MB or Microsoft Windows Home Server, Windows Home Server 2011, Windows 7 (32/64bit), Windows Vista (32/64bit) with 1GB of available RAM.
